To Whom It May Concern:

It is with great pleasure that I write a letter of reference for Restaurant Manager™.

Since 1990 we have had Restaurant Manager at Alario's Pizzeria located right near the University of Maryland in College Park. With its proximity to a college campus our establishment is high volume with a high turn around rate, thereby needing a reliable and stable POS system. Restaurant Manager provides us with flexibility and ease of use unmatched by competitors in the POS industry. The inventory control and scheduling programs offered by Restaurant Manager are great management tools that save a good deal of time and improve efficiency. We easily save an hour to an hour and a half a day using automated scheduling as opposed to the manual scheduling we had done before, building our own staff schedules is a tremendous asset.

Restaurant Manager's delivery interface has been extremely important to the delivery side of our pizzeria. The many features and enhancements included in this interface have improved the efficiency of the order taking process and the speed at which deliveries are made. The caller ID information retrieval has been a great marketing tool for tracking our customers. The layout and design of the system makes it easy to use, all of our employees enjoy using the system and take advantage of all it has to offer.

Restaurant Manager is a stable, flexible, easy to use POS system that is ideal for restaurants and pizzerias alike. I would recommend it to any restaurateur looking for a great management and marketing tool that saves time and improves efficiency. I have been so pleased with the product and service ASI provides that I even recommended it to my brother-in-law who owns a local bar in the area. He too has been extremely pleased with Restaurant Manager and has benefited from the many features and versatility it has provided.

Sincerely,

Alan Wanuck
Owner
Alario's Pizzeria
